Fish Consumption Advisory

All Waters

Advisory updated 10/26/2016

The Wyoming Game and Fish Department has tested fish from these waterbodies for mercury. The Wyoming Department of Health has provided consumption advice according to mercury levels. To determine the recommended maximum number of meals that may be consumed per month, find the species and length of the fish you caught and follow the recommendations described below. A meal is 8 oz. of uncooked fish or 6 oz. of cooked fish.

Data are available for the species and length-classes shown in the table. Where data are not reported, data are not available, and we recommend that sensitive individuals follow the General Fish Consumption Advice.
