

**Driving Directions:** Go about 2 miles north from Bondurant on Highway 26 to USFS road 30600 that joins the highway from the right (north). Take this good gravel road about 4 miles north to where it turns sharply up Riling Draw. From here the road gets rapidly worse and though it is technically passable most of the way to the stream, you may wish to park your vehicle about 0.8 miles or so after entering Riling Draw and either hiking the rest of the way or switching to ATV's. This 6.4 mile long instream flow segment extends from Shoal Creek Falls down to the confluence with West Shoal Creek.
